Ref. 080214

# WORK BOX ORIÓN

Ref. 080214

Reworking, polishing, micro-blasting... These are just some examples of the daily tasks which produce a significant amount of dust and debris in a dental environment. If you want to perform these tasks professionally and efficiently, it is vital to use a suitable tool. The Orión dust extraction box has been designed to meet this need.

With over 70 years' experience in manufacturing specialist equipment for dental professionals, this is the best example of **MESTRA**'s work. Utility, beauty, economy, simplicity, design, elegance and efficiency are the qualities which define **Orión**. We will demonstrate them in more detail in the following points.

## Characteristics:

Height 300 mm

Length 360 mm

Width 330 mm

Weight 3,33 kg

Voltage 230 V, 50/60 Hz

## Practicality

Seldom has a product aimed at dental professionals been built with such suitable dimensions as the **Orión** dust extraction box. Its size is small enough to fit any spot, yet wide enough to be able to work without restrictions.

Practicality in less space is the best definition that we can give you.

## Ergonomics

The working position has been studied carefully to achieve a comfortable and functional product.

The generous viewing window, the multipoint LED lighting which eliminates shadows while offering a colour tone similar to sunlight, the useful hand rest for polishing tasks, the micromotor support... The **Orión** dust extraction box adapts seamlessly to the needs of dental professionals.

## Efficiency

---

Its dust collection system deserves a special mention. The suction hood is strategically located so that it doesn't obstruct. The hood is connected to an external suction tube at the rear through a pivotable outlet.

Furthermore, detachable boxes collect the dust that could fall through the hand rests. We're talking about an ingenious system that keeps the inside of the chamber clean, making work much more pleasant.

## Quality

---

As with any other **MESTRA** product, when working with the **Orión** dust extraction box you can feel and notice the quality: the touch and texture of the materials, the precision of the fittings, the care in details that are hardly noticed at first glance...

All of these aspects differentiate a simply appropriate product from an excellent one. Durability, reliability and job satisfaction are the rewards offered by our products.

## Beauty

---

Sometimes it's the small things which surprise us with their beauty. Sometimes it's the little things attract us more than the big things.

The **Orión** dust extraction box is a good example. Its smooth and defined lines create an attractive visual effect. Our designers put an emphasis on a shape that doesn't clash with any dental work setting. We have to admit that they got it right.

At **MESTRA** we are specialized in the manufacture and distribution of dental machinery and appliances. We are a Spanish company based in Bizkaia. We currently export to clients in more than fifty countries on five continents and we have more than a thousand references in our catalogue.

We have maintained a line of constant expansion since our foundation in 1945, thanks to our best qualities: the high quality of our products that have earned the ISO 9001:2015 certification by TÜV Rheinland, a close and attentive relationship with our customers, and a constant technical innovation in the design of our products.

Our design philosophy is based on three fundamental pillars: the needs of our clients, the observation of the techniques used in dental laboratories and our more than 77 years of experience providing creative and contemporary solutions to the daily problems of professionals in the sector.
